

Fifth multidisciplinary neuro-oncological scientific meeting

april 16, 2015, Pathology department (M320.P.3.042 route 828); 'demoruimte'

Program:

17:30	Welcome	Dr. William Leenders
17:35	Anti-angiogenesis treatment in GBM: gauging reasons for failure	Dr. Simone P. Niclou
18:15	Break	
18:45	IDH-mutant inhibitors in IDH-mutated glioma: don't try this at home!	Dr. Remco Molenaar
19:15	Physiological MR of gliomas	Prof. Dr. Arend Heerschap
20:00	Closing	

Dear colleagues,

We would like to invite you to the multidisciplinary neuro-oncological scientific evening on april 16. All clinicians, researchers and others interested in neuro-oncology are invited. Please do forward this invitation!

Once again 3 researchers will present their recent work. Dr Simone Niclou, director of Norlux labs (Luxemburg Institute of Health) will present her work on angiogenesis and anti-angiogenic treatment for glioma. Dr Remco Molenaar from the AMC will tell us about therapeutic consequences of the IDH mutation which is often observed in glioma and Professor Heerschap will enlighten us about the physiological MR of gliomas.

We are sure this will be an interesting evening again for all those involved in neuro-oncology.

“kroketten” will be provided during the break!

William Leenders en Mark ter Laan

Deze avond is een halfjaarlijks terugkerende avond waarop telkens actuele onderwerpen op het gebied van de neuro-oncologie worden belicht en een aantal onderzoekers de gelegenheid krijgt zijn onderzoek te presenteren. Op deze wijze hopen we bij te dragen aan de samenwerking tussen alle afdeling en wellicht tot nieuwe onderzoeksideeën te komen.
